

5 WAYS TO SIMPLIFY FIBER MANAGEMENT IN 3-GIS | WEB

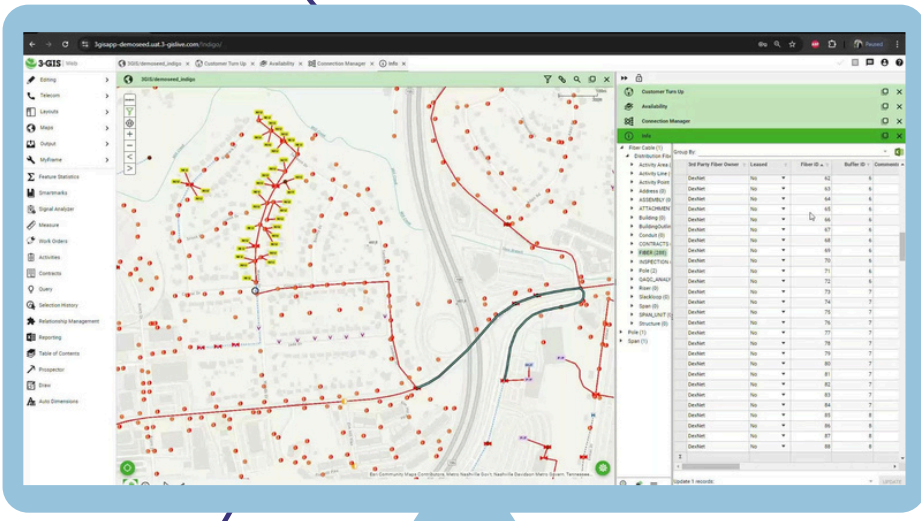

UNDERSTAND FIBER AVAILABILITY

See the number of fibers in each cable, whether they are assigned to a customer, and if they are available for use.

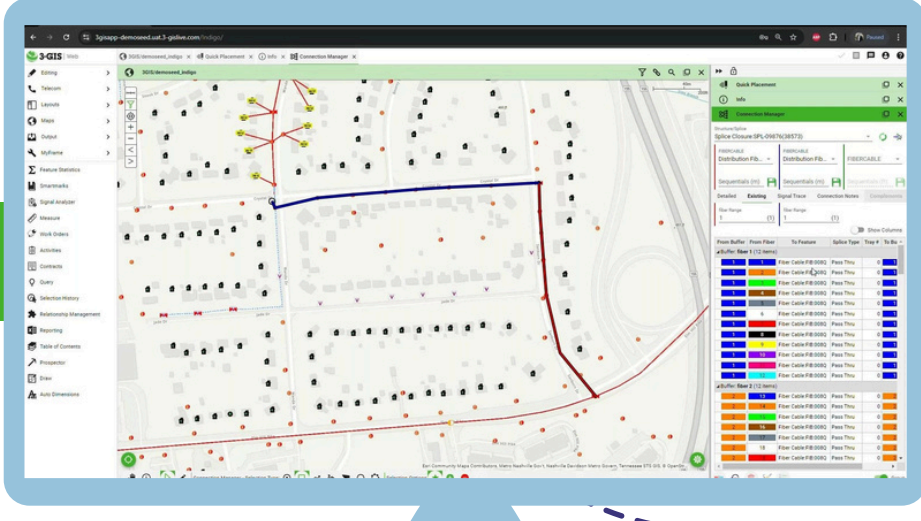

IDENTIFY LEASED FIBERS

Assign ownership and leasing information to individual fiber strands or entire cables.

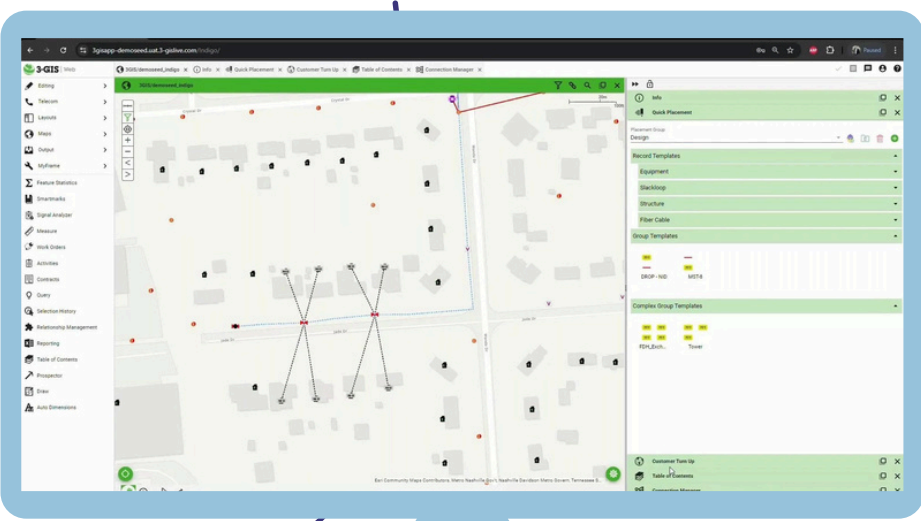

STREAMLINE SPLICING

Perform precise splicing at key points in the network and control fiber behavior from the start.

PLACE CONNECTED EQUIPMENT

Empower asset placement with group templates that quickly create multiple pieces of connected equipment.

VISUALIZE THE SIGNAL PATH

Gain complete visibility into each signal to identify end users, calculate attenuation, and pinpoint outages.
