

3-GIS | Diagramming

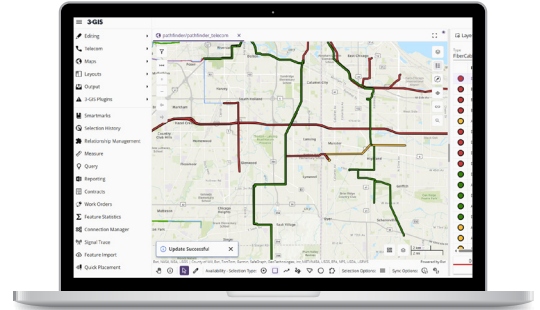

Streamlined
diagram creation

Configurable
output

Consistency and
uniformity

Understand your network connectivity at a glance

3-GIS | Diagramming gives you the tools needed to streamline the creation of your network diagrams. Generate configurable, dynamically adjusted diagrams, eliminating the need for manual updates when modifications to network connectivity occur in 3-GIS | Web. Simplify exporting and easily share in conjunction with other construction documents and deliverables to ensure data remains complete, current, and consistent.

What you can do with 3-GIS | Diagramming

3-GIS | Diagramming puts your stored network connectivity data to use, extracting an end-to-end visual representation of your logical network and reporting connectivity and splicing requirements to contractors for buildout. It delivers timely, uniform reports to stakeholders and reduces the need to train users on manual diagram drafting processes.

What 3-GIS | Diagramming can do for you

3-GIS | Diagramming generates project-tailored diagrams based on network connectivity data and feature symbology stored within 3-GIS | Web. Easily export and share comprehensive layouts of port-level connections both upstream and downstream, or view directly within the 3-GIS | Web interface.

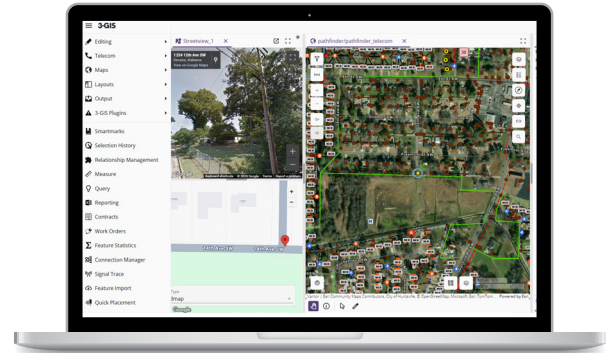

About 3-GIS | Diagramming

3-GIS | Diagramming automates output through a consistent method of diagram creation, so every drawing follows the same standard. Configure diagrams to fit each project, select multiple ports at once, and simplify network layout for easier reading. Export a connectivity model view complete with a symbology legend and details, and watch it update dynamically as your network data changes.

Key Features

3-GIS | Diagramming puts you in control of your fiber network, making it easy to:

- Automated output
- Consistent method of diagram creation
- Exportable view of connectivity model
- Project-tailored configuration
- Easy data delivery

About Us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and webbased services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
