

# 3-GIS | Mobile

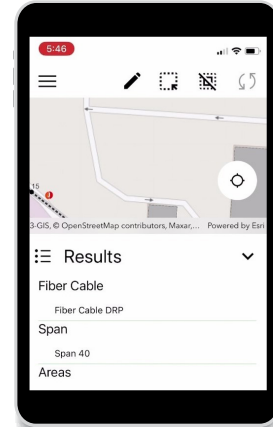

Improve construction  
rideout efficiency

Accurate network  
documentation

Job-at-hand  
simplicity

## Your fiber network data available onsite all the time

3-GIS | Mobile tackles the complexities of planning, constructing, and restoring fiber networks by empowering field crews with direct access to network data directly from their mobile devices—expediting data capture, improving the efficiency of critical rideouts, and providing real-time networks information.

## What you can do with 3-GIS | Mobile

Enabling field mobility equips teams with the power to seamlessly synchronize field data, ensuring the ongoing accuracy of system records. Through its user-friendly and customizable interface, 3-GIS | Mobile grants easy access to necessary tools and information, streamlining field operations and minimizing time spent on-site.

## What 3-GIS | Mobile can do for you

3-GIS | Mobile allows field users to easily view, edit, create, and search for features from their mobile devices. Users can run reports, quickly pinpoint the location of an outage, redline areas of concern, and update construction status as buildout progresses.

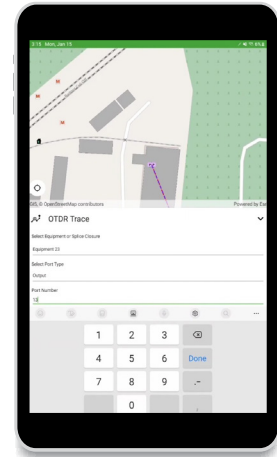

## About 3-GIS | Mobile

Create and submit redlines, trace the location of an outage, and generate splice and panel reports right from the field. Conduct detailed inspections on Android or iOS with minimal training, then share updates seamlessly to 3-GIS | Web.

## Key Features

3-GIS | Mobile helps you take control of your fiber network whenever and wherever you are by making it easy to:

- Create and submit redlines
- Update network data from the field
- Trace the location of an outage
- Generate splice and panel reports
- Conduct detailed inspections in the field

## About Us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and webbased services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
