

3-GIS | Prospector

Speed to revenue

Rules-based
consistency

Budgetary costs
calculations

Planning your next network just got easier with 3-GIS | Prospector

The 3-GIS | Web extension, Prospector, brings the speed of an architectural engine to network planning. Network planners can use Prospector to create a route to reach thousands of points in minutes.

What you can do with 3-GIS | Prospector

Prospector's machine-prescribed routes provide accurate cost estimates in minutes, find new revenue opportunities, and increase the scale of production. Better routes and more accurate cost estimates reduce engineering risk, and help companies plan faster and respond to bids more rapidly, getting more fiber in the ground faster.

What 3-GIS | Prospector can do for you

3-GIS | Prospector, uses a multi-modal technique to look across specific network variables and datasets defined by engineers such as; existing infrastructure, regulations, geographic barriers, and construction costs, then uses an architectural engine to prescribe routes and place network features.

About 3-GIS | Prospector

3-GIS | Prospector generates rules-based and least-cost routes in minutes, giving you accurate cost estimates without adding staff to your team. Apply multi-model modeling to establish the most efficient path while avoiding costly construction barriers, and create alternate routes that uncover additional revenue opportunities as you optimize potential.

Key Features

3-GIS | Prospector puts you in control of your fiber network, making it easy to:

- Receive accurate cost estimates in minutes
- Increase scale of production without increasing staff
- Find additional revenue opportunities
- Create alternate routes to optimize revenue potential
- Generate rules-based prescribed routes

About Us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and webbased services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
