transfer

Accelerate your speed to revenue with 3-GIS | Web APIs

For our 3-GIS | Web customers looking to consolidate data entry, we offer APIs to tailor the way you view and interact with your fiber network and business data. Expedite information exchange to help streamline your business operations, improve enterprise-wide communications, and make better informed business decisions.

What you can do with 3-GIS | Web APIs

With plans to meet your organizational needs, 3-GIS | Web APIs provide your in-house software developers the assets needed to tie into the systems and tools you depend on, enabling greater control over how you manage your fiber network data. Use APIs to write to and read from your 3-GIS enterprise database to transmit information faster and reduce risk for human error.

What 3-GIS | Web APIs can do for you

3-GIS | Web APIs make available REST endpoints upon which to build your custom logic. Included with delivery are comprehensive documentation, OpenAPI specifications, an API license file, and a selection of support plans to fit your business needs.

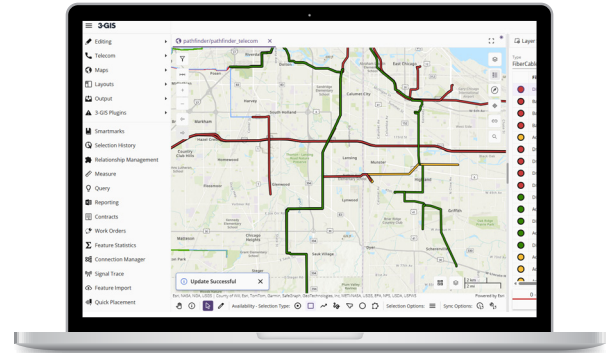

About 3-GIS | Web APIs

3-GIS | Web APIs are built on the OpenAPI 3.0 standard, with endpoints documented for straightforward integration. Requests and responses use JSON and GeoJSON, formats your team already works with, and each 3-GIS | Web install ships with an updated API list. Granular authentication and permissions keep access under your control as you connect the platform to your broader systems.

Key Features

3-GIS | Web APIs helps you take control of your fiber network by making it easy to:

- Document endpoints built on OpenAPI 3.0 standard
- Use JSON and GeoJSON data formats for requests and responses
- Update API list delivered with each 3-GIS | Web install
- Manage granular authentication and permissions

About Us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and webbased services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
