

# 3-GIS | Web

Live

Anytime,  
anywhere access

Easy to scale

Secure hosting  
platform

## Keep your data backed up and secure

3-GIS | Live, the cloud-based deployment of 3-GIS | Web, offers the fastest route to production by immediately providing you with the infrastructure you need for the project at hand. Hosted in the Amazon Web Services (AWS) world class, secure cloud platform, Live offers easy scalability at a moment's notice, relieving your team of hardware maintenance, server configuration, data backups, and IT upkeep, so you can focus your attention on your fiber network.

## What you can do with 3-GIS | Live

3-GIS | Live is the recommended deployment solution of the 3-GIS software suite for enterprises looking to get up and running faster, with direct access to the latest releases, training, maintenance, and available support. Capture accurate live field data, keep teams in sync, and leverage easy-to-use administration and reporting, all from a powerful web-based architecture hosted in a secure cloud environment. Unsurpassed uptime and security keep your data accessible to those who need it, off-loading the need to manage your own IT infrastructure.

## About AWS

AWS is the world's most comprehensive and broadly adopted cloud platform, used by millions around the world, from large enterprises to government agencies. It is designed to be the most flexible and secure cloud computing environment available today, offering unsurpassed 99.9% uptime and over a decade of proven global operational expertise.

## About 3-GIS | Web Live

Get up and running quickly with 3-GIS | Web Live, built on a proven infrastructure architecture that grows with your network. A global network of regional servers keeps updates streamlined and configuration support fast, while automatic software updates and regular backups keep your system current and protected. When issues come up, expert support means faster troubleshooting and less downtime.

## Key Features

3-GIS | Live helps you take control of your fiber network by making it easy to:

- Model every fiber and port
- Model duct connectivity
- Record and trace signal wavelengths
- Generate splice and equipment reports
- Document contracts and vital activities

## About Us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and webbased services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
