

3-GIS
BY SSP INNOVATIONS

Network Solutions

AltNets

Expedited planning and design

Enterprise-wide collaboration

End-to-end network inventory management

Usable and accurate data for the lifetime of your network

3-GIS | Network Solutions combines world-class network inventory management software and outside plant engineering expertise to enable AltNets to quickly design fibre networks and capitalise on existing investment. Integrating a GIS-based solution built to support every stage of fibre network deployment, 3-GIS | Network Solutions provides the tools needed to bridge the gap between each phase of fibre deployment.

Software that takes you from start to finish

From identifying duct space usage to tracking fibre capacity, the 3-GIS software suite enables your team to plan, manage, and operate your fibre networks from a single system. Use our software to plan your networks from the onset or transfer existing data to start managing effectively. Our comprehensive software suite can take your networks from any starting point through operation and management for its entire lifetime.

What you can gain with 3-GIS | Network Solutions

3-GIS | Network Solutions provides an end-to-end, collaborative system to support the entire enterprise. With the implementation of supplemental GIS data, physical and logical network modelling, and ESRI supported maps, your teams are provided with the insight needed to make strategic decisions for the job-at-hand.

Key features

- > Automate least cost routing
- > Enhance visibility with multiple map views
- > Integrate data to inform decisions
- > Take data offline for field activities
- > Extract construction-ready documents
- > Update data in real time
- > Use dashboards to track progress
- > Communicate with stakeholders directly within the system
- > Record outage activities to track issues over time

Service security and compliance

In order to support requirements for security groups (virtual firewall) advanced encryption, subnets, IAM, VPC (including ingress and egress controls), 3-GIS | Live is hosted AWS. AWS is aligned and compliant with applicable regulations and standards including ISO/IEC 27001/2. We utilise relevant standards as we configure our solutions in the AWS cloud infrastructure. AWS offers secure solutions for highly sensitive data such as government agencies and departments as well as private firms.

About us

3-GIS, an SSP Innovations company, empowers companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex fibre networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionise the potential and realise the market opportunities of fibre assets. Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of fibre networks; creating a more connected, informed, and lighted world.
