

Keep systems updated
in real time

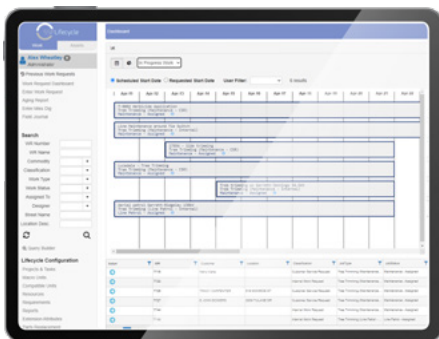

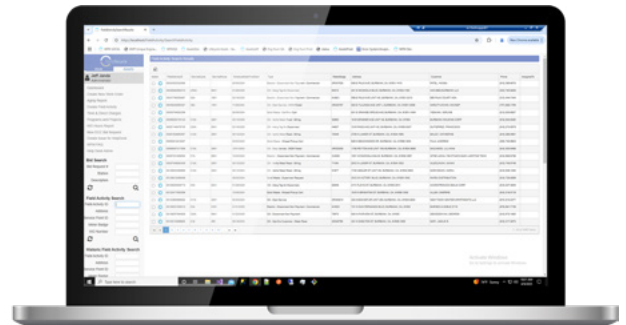

Simplify work and
asset tracking

Deliver data crews
can act on

Workforce management built just for utilities

3-GIS | Lifecycle was built by utilities, for utilities, to solve the daily challenges of managing work and assets. By putting engineering and operations at the center, Lifecycle streamlines workflows and delivers a simple, intuitive user experience. Crews get one dashboard with everything they need, while enterprise systems like GIS, ADMS, ERP, and EAM stay updated in real time.

What you can do with 3-GIS | Lifecycle

Unlike generic work management tools, Lifecycle was designed to go where the work is performed, bringing actionable information directly to the field. It eliminates the headache and overhead of costly integrations by serving as a single point of connection across systems. The result is a more efficient, cost-effective way to keep your organization in sync, track the full history of work and assets, and move projects forward with confidence.

What 3-GIS | Lifecycle can do for you

3-GIS | Lifecycle gives utilities a smarter way to manage both assets and the work around them. Instead of juggling multiple systems or forcing crews to work with outdated tools, it connects everything through one consistent view. Field teams see the information they need in a simple dashboard. Office systems like GIS, ADMS, ERP, and EAM stay in sync automatically.

The payoff is less time spent reconciling data, fewer errors in reporting, and more focus on the work that matters. From inspections to long-term planning, Lifecycle helps utilities keep their operations moving while lowering costs and meeting compliance requirements.

Key features

3-GIS | Lifecycle was built to simplify utility operations by keeping every system and every crew on the same page. Here are a few of the ways it

- > Sync GIS, ADMS, ERP, and EAM systems
- > Track complete work and asset history
- > Provide one dashboard for field crews
- > Streamline workflows across operations
- > Reduce costs with single integration point
- > Add a system of engagement to EAM

About us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
