

Keep your organization
in sync

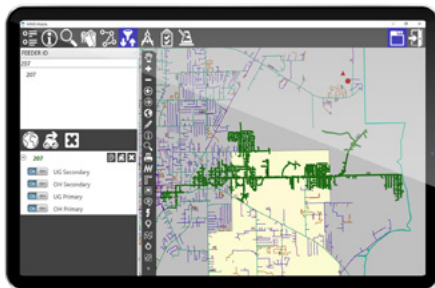

Act on enterprise data
in the field

Save time with one
solution

The mobile GIS that works the way you do

3-GIS | MIMS combines powerful GIS functionality with an intuitive interface that feels familiar from day one. Crews get real-time access to the full GIS—not just maps—plus the ability to perform inspections, investigations, and outage response right from the field. With MIMS, you'll cut down on the back-and-forth, keep your entire organization in sync, and deliver safer, more reliable operations.

What you can do with 3-GIS | MIMS

With MIMS, utility crews can carry the full GIS into the field. That means they can:

- > Perform inspections and record results on the spot
- > Investigate leaks and safety concerns with the latest data
- > Manage vegetation and right-of-way conditions
- > Respond to outages and damage assessments in real time
- > Execute and track switch orders directly from their device

What 3-GIS | MIMS can do for you

3-GIS | MIMS was designed by looking closely at how utility crews really work. The result is a mobile GIS that simplifies engineering and operations tasks, improves efficiency, and reduces training time. Whether your workflow is a simple form or a complex, multi-step process, MIMS handles it with ease. Information from enterprise systems like SAP, Maximo, and CGI flows into a format crews can act on immediately—so the right data reaches the right hands at the right time. From vegetation management to switch order execution, MIMS delivers tools that help utilities stay productive, compliant, and connected in the field.

Key features

By combining enterprise integrations with an intuitive, consumer-style interface, MIMS gives field users everything they need to keep operations moving, stay compliant, and maintain safer, more reliable networks.

- > Access GIS data in real time
- > Integrate with SAP, Maximo, CGI
- > Perform inspections and assessments
- > Trace networks and isolate equipment
- > Manage outages and switch orders
- > Handle vegetation and leak management

About us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
