

3-GIS | SPANS transforms joint use management from a source of stress into an organized system for managing permits, agreements, and inter-company communications. Real-time communication and a documented record promote accountability, help head off disputes, and defend against potential litigation.

By embedding compliance into every step of the workflow, SPANS ensures regulations, agreement terms, and company policies are naturally enforced. The result is less guesswork, fewer surprises, and a joint use department that not only reduces risk but can also become a reliable source of revenue.

3-GIS | SPANS is configured for you, with you. By understanding your business situation and objectives, we deliver a solution that matches your preferred processes. A workflow-based environment and clear assignment of "next actor" responsibility keep projects moving from start to finish. You'll see permit requests and company-initiated construction in real time, so you can proactively prioritize work and staffing. With compliance built into every step, SPANS helps you minimize losses, improve accountability, and turn joint use into a reliable, revenue-generating function.

Key features

3-GIS | SPANS helps you take control of joint use by making it easy to:

- > Track project records and actions
- > Manage pole attachments and moves
- > Handle adds, removals, and transfer
- > Record sales and rearrangements recaps
- > Assign responsibility at each step

About us

3-GIS empowers telecom and utility companies to achieve better operating efficiencies and to meet the challenges of building increasingly complex networks. 3-GIS uses a data driven approach based on geospatial reference, rules-based calculations, mobility, and web-based services to revolutionize the potential and realize the market opportunities of network assets. With products purpose built for telecom and utility operations, we provide the visibility and confidence teams need to make better decisions, reduce costs, and move faster.

Our fully-configurable solutions allow users to plan, design, and manage networks; provide real-time data that is used enterprise-wide; and enable automation for faster service activation, in one seamless system. The company has development, design services, product support, and operational staff in five countries challenging the status quo every day to improve the economic visibility of the networks we depend on; creating a more connected and informed world.
